ILLUST SPACE

Discovery Interface

Accessible via mobile device and across browsers, the Illust Space camera and map viewer is discoverable via web URL. Visit https://AR.ILLUST.SPACE Simply confirm access to your phone's camera, location, and orientation services to participate in the geo-placed digital experience.

Name of the Piece. When a piece hasn't been discovered it will say "Searching the Metaverse".

Map Navigation. By tapping on the map a user can explore the artwork around a community. Red markers are being replaced with file PNG's.

NFT Artwork/Object. Using tracking technology and the phone's GPS coordinate system, objects will materialize in scene as they are discovered on the map. We are working to make this experience more precise and with a greater level of persistence.

Camera & Compass. If an object is discovered the camera feature will be available. If you're on the hunt, a compass will help lead you to the next object on your journey.

Guestbook/Share. This feature provides users with the opportunity to share their thoughts about their experience. The team is working to make these guestbook entries shareable.

More Info. Learn more about the artist, piece, story, and where to find it listed for auction.

Pre Discovery

Checklist

✅ Phone Camera Permissions On

✅ Phone Orientation Permissions On

✅ Phone Location Permissions On
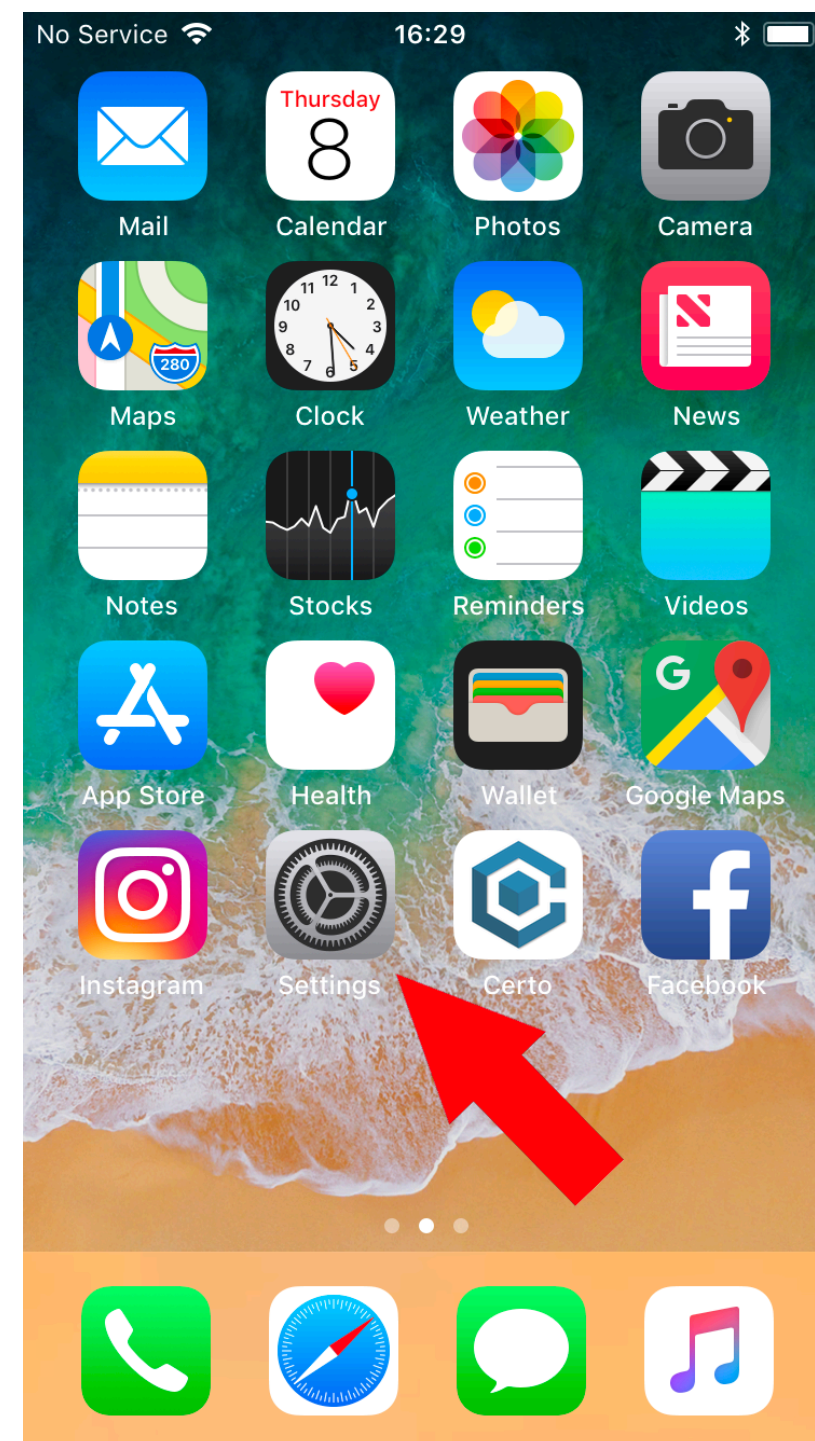

✅ Decent mobile device signal

Troubleshooting

1. **Do I have to accept all of the permission in order to experience the Discovery app?** Yes, there should be 3 permissions you have to accept in order to experience the application, Camera, Orientation, and Location permissions. If you do not accept all three of these you will have to enable the permissions in your phone. Note: android devices do not have these permissioning issues. See next slide for more.

2. **How do I discover a NFT in the real world?** As a user you will need your blue location dot to be directly on a pin within ~20 ft, give your device a second to load if you are in an area with poor cell reception.

3. **How do I move to the next NFT?** Tap the map navigation panel which will make the map full screen. Then click on any of the pins. Once you find a piece you would like to see in AR, click "Navigate Here" tab, close out of the map and walk to the location.

4. **Where is the map?** Be sure your location permissions are set to always on in the browser device you are using. See next slide
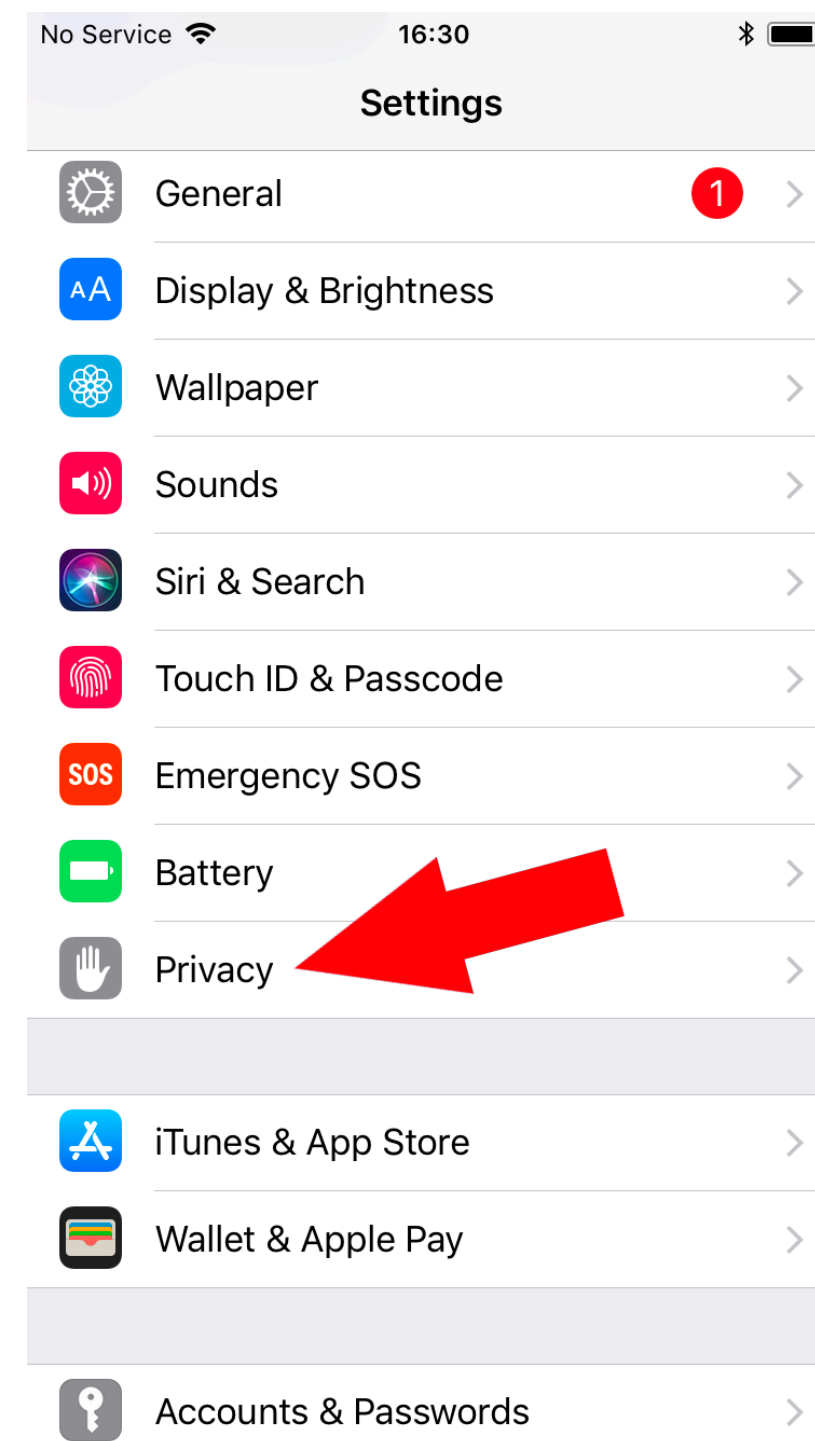

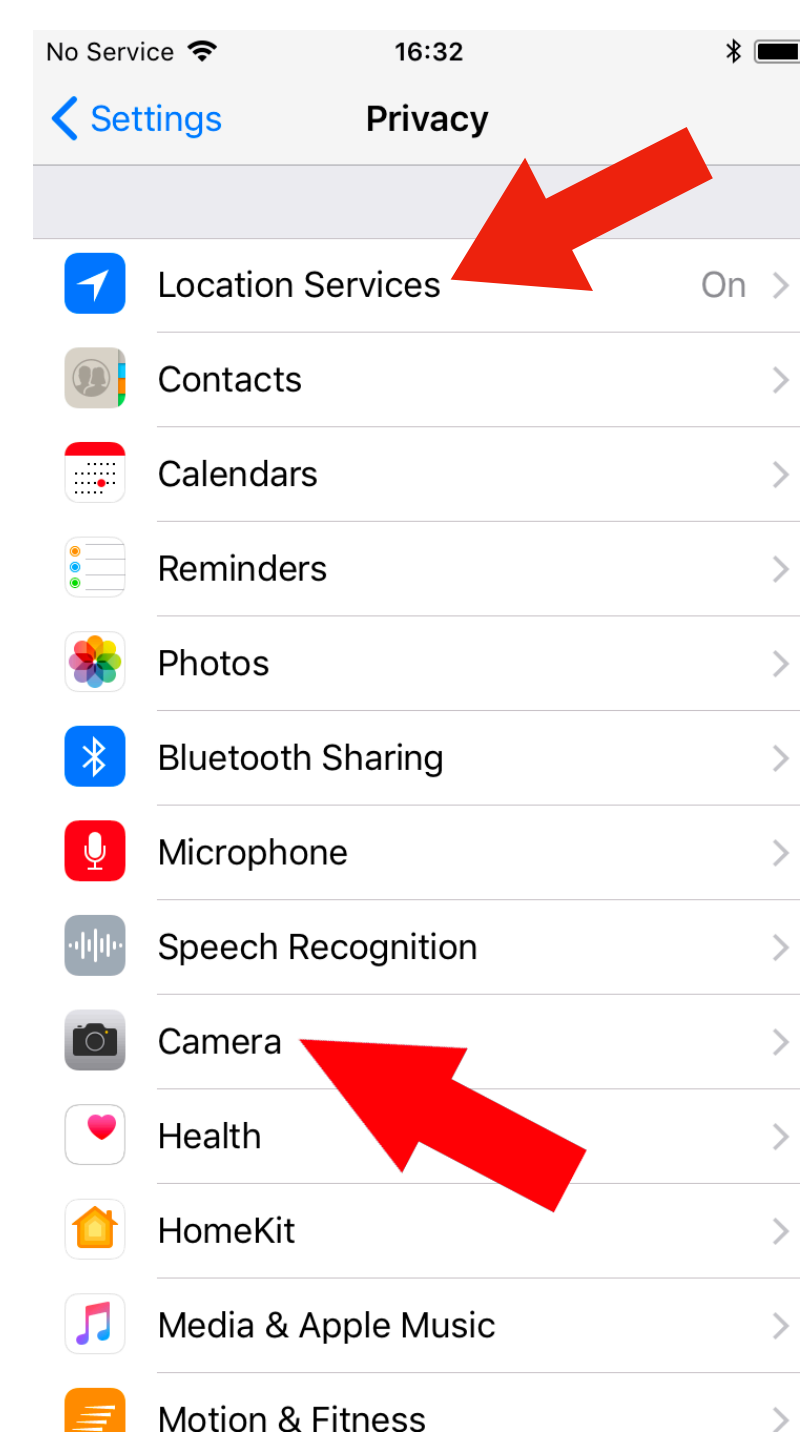

NFT Discovery
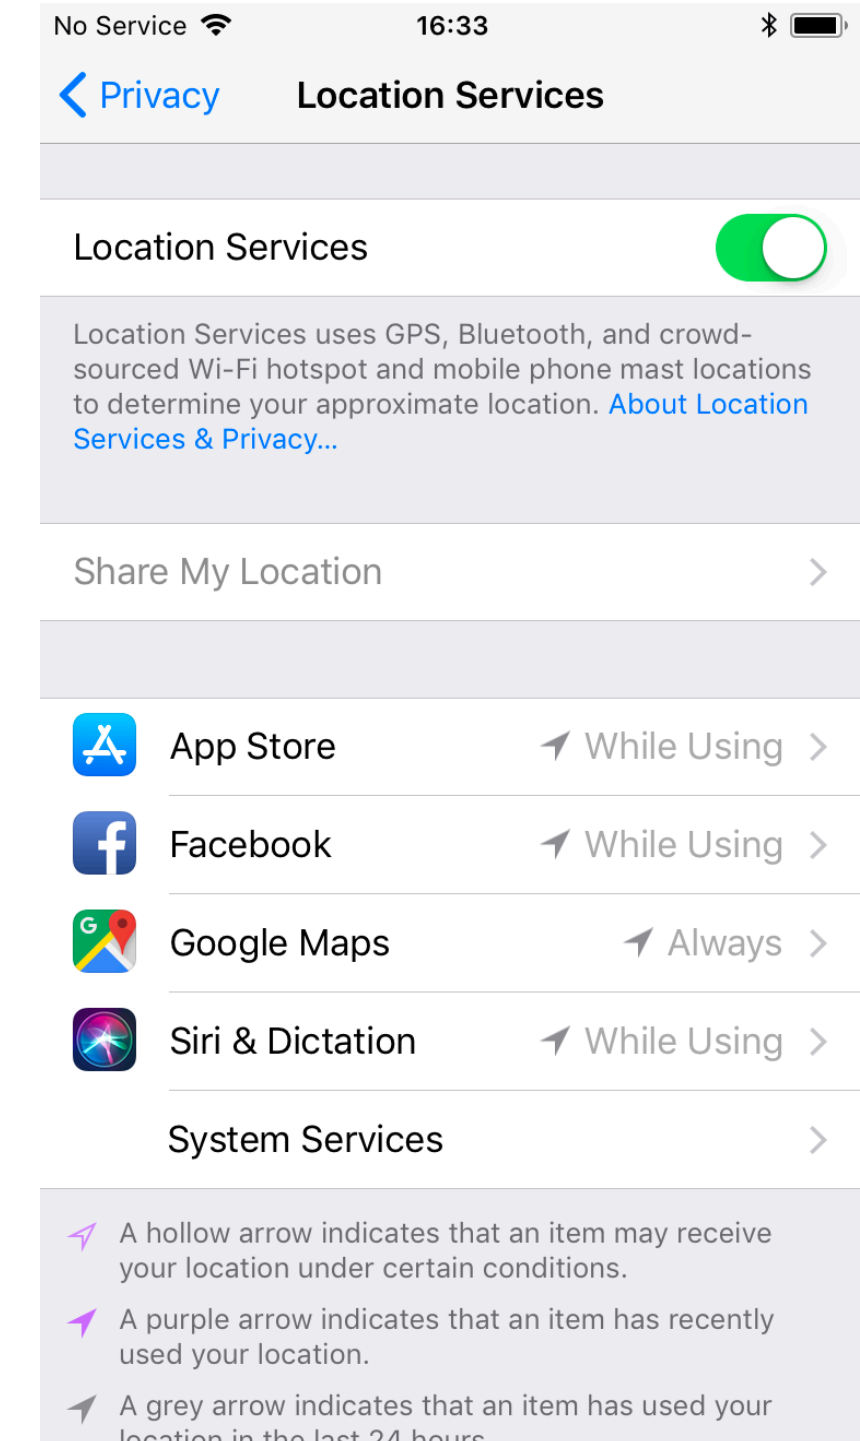

I-Phone Permissions Exhibit

1. Open Settings

2. Tap Privacy

3. Tap Location Services or Camera to turn permissions on

4. Select the required app to change its location settings. In this case Safari, Chrome, Brave, depends on the browser being used
